

## LANDS surveying alert

*Qld EDM baselines*

7 December 2021  
Issue 48

### **Legal Traceability of Length for EDME**

The 2021 Queensland EDM baseline recertifications have been completed and the webpage for legal traceability of length has been updated with new Regulation 13 certificates, calibration software and baseline information. The Department thanks surveyors for their patience during the COVID related delay affecting baseline recertification. Surveyors are encouraged to undertake EDME testing as soon as possible after the publication of new Regulation 13 certificates and calibration software, following baseline recertification.

For more information, please visit the Resources webpage for legal traceability of length or contact your local Resources office.
